

trading filter: exponential vs power-law ( $\gamma = 1$ ,  $\kappa = 2$ ,  $\beta = 0.5$ ;  $\lambda = 0.1$ ,  $\eta = 0.05$ )

(a) transfer function  $|H(\omega)| = 1/\sqrt{n(\omega)}$

(b) impulse response  $h(\tau) = \mathcal{F}^{-1}[1/n_+]$
